---

## 1. Statement of Intent

This document defines the **NON-NORMATIVE owl** as a formal epistemic state within the Owl Semaphore system.

This is not a decorative variation of the normative mark. It is a mathematically defined reflection state with a specific role in analysis, interpretation, and structured disagreement.

The goal is to preserve rigor while allowing controlled deviation from the baseline framework.

---

## 2. System Context

The Owl Semaphore system is defined by the Klein four-group:

$$V_4 = \{I, \sigma_v, C_2, \sigma_h\}$$

The NON-NORMATIVE owl corresponds to the vertical reflection operator:

$$\sigma_v : (x, y) \mapsto (-x, y)$$

---

# 3. Ontological Role

## 3.1 Semantic Designation

NON-NORMATIVE represents:

- legitimate alternative interpretation
- reflective critique
- analytical deviation
- structured disagreement

## 3.2 Interpretive Role

This state indicates that the content:

- departs from the canonical model
- remains structurally grounded in the same system
- is not arbitrary or invalid

## 3.3 What It Does Not Mean

- not random
- not incorrect by default
- not adversarial (that is CRITICAL)

It is **reflection**, not rejection.

---

# 4. Mathematical Definition

## 4.1 State Operator

$$T_{\text{non}} = \sigma_v$$

## 4.2 Matrix Form

$$\sigma_v = \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix}$$

## 4.3 Determinant

$$\det(\sigma_v) = -1$$

## 4.4 Properties

- orientation-reversing
- reflection class
- order 2

$$\sigma_v^2 = I$$

---

## 5. Coordinate System

The NON-NORMATIVE state uses the same coordinate system as NORMATIVE:

- canvas: $1080 \times 1080$
- center: (540, 540)

Transformation is applied relative to this center.

---

## 6. Canonical Orientation

### 6.1 Visual Definition

- upright
- faces LEFT

### 6.2 Transform Relationship

The NON-NORMATIVE owl is the horizontal mirror of the normative owl.

---

## 7. Asset Topology

Layer structure is identical to normative:

- L1 — inner field
- L2 — meander ring
- L3 — owl body
- L4 — outer ring

### 7.1 Composite Definition

$$N_{\text{non}} = L_1 \oplus L_2 \oplus L_3 \oplus L_4$$

---

## 8. Geometry

All geometric constraints are inherited from the normative standard:

- identical radii
- identical center
- identical annular structure

No geometric deformation is permitted.

---

## 9. Color Specification

### 9.1 Palette

- outer ring: #316964 (teal)
- owl: #316964 (teal)
- field: #d2d8d6 (cool gray)
- meander: unchanged (gold)

### 9.2 Color Doctrine

Teal represents analytical distance from the normative baseline while maintaining structural coherence.

---

## 10. Transparency and Alpha

Same rules as normative:

- RGBA required
- corner alpha = 0
- center alpha = 255

---

## 11. Provenance

### 11.1 Construction

Derived from normative by:

- horizontal reflection
- no rotation
- no scaling

### 11.2 Transform Integrity

The transform must be exact. Any distortion invalidates the state.

---

## 12. Asset Invariants

### 12.1 Algebraic

- operator = $\sigma_v$
- determinant = $-1$

### 12.2 Visual

- upright
- mirrored orientation

### 12.3 Structural

- geometry unchanged
- layer structure unchanged

---

## 13. Integrity Regime

All assets must:

- pass SHA-3-512 verification
- be reproducible from layers

---

## 14. Interpretation Rules

### 14.1 Positive Rule

When present:

The content reflects the normative framework while offering a structured alternative.

### 14.2 Negative Rule

It does not indicate failure or error.

---

## 15. Non-Permitted Changes

- rotation
- vertical flip
- C2 inversion
- geometry alteration

---

## 16. Relationship to Other States

- NORMATIVE → identity
- NON-NORMATIVE → reflection
- CRITICAL → inversion
- METACOGNITIVE → frame inversion

---

## 17. Formal Definition

Let $L_1$–$L_4$ be the layer fields.

$$N_{\text{non}} = L_1 \oplus L_2 \oplus L_3 \oplus L_4$$

with

$$T = \sigma_v$$

---

## 18. Closing Statement

The NON-NORMATIVE owl preserves system integrity while enabling structured deviation.

It is the mechanism by which the system permits disagreement without collapse.

## OWL SEMAPHORE SYSTEM — CLASSIFICATION LEDGER

**NORMATIVE**

$T = I \quad \det = +1$

$(x, y) \to (x, y)$

*"This is the standard."*

RFC 2119 MUST / SHALL

**NON-NORMATIVE**

$T = \sigma_v \quad \det = -1$

$(x, y) \to (-x, y)$

*"This reflects the standard."*

Informative / Advisory (NOTE)

**CRITICAL**

$T = C_2 \quad \det = +1$

$(x, y) \to (-x, -y)$

*"This inverts the standard."*

RFC 2119 MUST NOT / SHALL NOT

**METACOGNITIVE**

$T = \sigma_h \quad \det = -1$

$(x, y) \to (x, -y)$

*"This audits the standard."*
